

Relay Enterprise Admin Guide

DRAFT v0.1 first-pass content, pending content review.

1. Your console

The enterprise console is your single place to manage departments, people, minutes and billing. The left rail switches between Overview, Recharge, Usage, Members, Settings and Resources. Supervise and Finance open the org-level consoles in a new view.

2. Departments & people

Open Overview to see every department with its minutes and activity. Click a department to drill in: there you can refill it from the org pool and add a new employee (name + email + optional starting minutes). New employees receive an email invitation to join; their starting minutes are drawn from the department's pool.

3. Recharge & wallet

Recharge buys minutes for the organization's pool. Pick a bundle, then Recharge once your partner discount, if any, applies automatically at payment. Recent transactions lists each session debit and recharge with its date and amount.

4. Settings & profile

Settings lets you edit your own name, the organization name, primary domain and data-retention window, and switch the theme (light / dark / espresso). Changes save immediately and persist across reloads.

5. Supervise & Finance

Supervise shows the live, org-scoped session grid for your organization. Finance is the org-level money and feedback console. Both are scoped to your organization only.

6. Support

Questions? Contact your Relay account manager or your channel partner if your account was provisioned through one.
