

Relay Onboarding Employees

DRAFT v0.1 first-pass content, pending content review.

Before you start

Make sure the department exists and has minutes. In Overview, click a department to see its remaining pool; refill it from the org pool first if it is low.

Step 1 Add the employee

Open the department (Overview -> click the department row). In the drill-in, under 'Add employee', enter the person's full name and work email, and optionally a starting minute allocation (drawn from the department pool). Press 'Add & invite'.

Step 2 They accept the invite

The employee receives an email invitation. When they sign in for the first time, their account is linked to the department and activated. Their status moves from invited to active.

Step 3 Top up minutes as needed

Department admins can refill an individual employee from the department pool: Overview -> click the employee -> 'Refill from department pool'. Enterprise admins refill the whole department from the org pool.

Notes

Minutes always flow org pool -> department pool -> employee. Top up the level above first if a pool is dry. All transfers are recorded with a date in the transactions list.
